Must-Read!

SOLISCADA Installation and License Activation Guide

1. Software Installation Specifications

It is recommended to spend few minutes reviewing the PDFs under the **Startup Guide file** before installation. The specific path is within the installation package at: *Manual**ENU**Startup Guide* directory.

Installation Precautions:

- It is advisable to install on the Enterprise or Professional edition of the Windows operating system specified in the installation specifications.
- Before installation, ensure that your antivirus software and firewall are turned off; after installation, add the software to the antivirus whitelist (trusted zone).
- Run the installation program as an administrator before installation.
- Extract the installation package before running the setup; do not click on "Setup" directly within the compressed package.

2. Installing SOLISCADA

- During installation, please keep the default system drivers and do not uncheck any drivers.
- (2) Avoid using overly nested directory paths for the installation directory. It is recommended to use a single-level directory, such as C:\SOLICADA or D:\SOLISCADA. For detailed installation instructions, please refer to the user manual "SOLISCADA Software Installation".

3. Completion of Installation

After the software installation is complete, two icons- "SOLISCADA Project Manager" and "SOLISCADA Monitor Operation"- will be created on the desktop, and you will be prompted to restart your computer.

4. License Activation (50,000 Tags Free)

When first installed, the software is unauthorized by default, and you can run the software without a license for up to 2 hours and configure up to 10 tags.

Please follow the steps below to get your license key for free (50,000 Tags):

a. Visit <u>www.soliscada.com/myAccount</u> and sign in to your account.
